Subject

AP ENDSEM PROJECT

Authors:

Aditya Upadhyay (2022040) Sanyam Barwar (2022447) This Is a write up for game made Stick Hero.

We have made this using JavaFx

```
package com.example.stick hero final project;
import javafx.animation.*;
import javafx.application.Platform;
import javafx.scene.control.Label;
import javafx.scene.image.Image;
import javafx.scene.image.ImageView;
import javafx.scene.input.KeyCode;
import javafx.scene.input.MouseEvent;
import javafx.scene.shape.Rectangle;
import javafx.stage.Stage;
import javafx.util.Duration;
import javafx.scene.media.Media;
import javafx.scene.media.MediaPlayer;
import java.util.ArrayList;
import java.util.concurrent.atomic.AtomicInteger;
```

These are the imports which we need to work upon the Project, we also mentioned these in our Pom.xml.

The Pom.xml contains the dependencies to be needed in the code.

It is simple code extending Application Class that is generated to work upon.

```
package com.example.stick hero final project;
import javafx.application.Application;
import javafx.fxml.FXMLLoader;
import javafx.stage.Stage;
import java.io.IOException;
public class Game extends Application {
   public void start(Stage stage) throws IOException {
       FXMLLoader fxmlLoader = new
FXMLLoader (Game.class.getResource("hello-view.fxml"));
      Scene scene = new Scene(fxmlLoader.load(), 320, 240);
      stage.setTitle("Stick Hero Ninja !!!");
      stage.setScene(scene);
when press red cross buttomn although not needed
       stage.setHeight(800);
       stage.setMaxWidth(600);
       stage.show();
   public static void main(String[] args) {
```

the main here is simple that can be run directly from the terminal.

```
package com.example.stick hero final project;
import javafx.animation.*;
import javafx.application.Platform;
import javafx.fxml.FXML;
import javafx.fxml.FXMLLoader;
import javafx.scene.control.Label;
import javafx.scene.input.KeyCode;
import javafx.scene.input.MouseEvent;
import javafx.scene.layout.*;
import javafx.scene.shape.Rectangle;
import javafx.stage.Stage;
import javafx.scene.media.MediaPlayer;
import java.util.ArrayList;
import java.util.concurrent.atomic.AtomicInteger;
import static java.lang.Thread.sleep;
public class StickHero extends Thread implements ScoreInterface, Cherries,

```

this is the main code to be worked upon that works as a heart here everything works created in smaller chunks.

The code here specifies it.

We have included 2 design patterns 1st Singleton and second Decorator.

Here the Singleton is used with cherry as cherry here needs to be instantiated once and after that we can access it by just resetting the X and Y coordinates.

```
package com.example.stick_hero_final_project;
import javafx.scene.image.Image;
import javafx.scene.image.ImageView;
import java.io.FileInputStream;
import java.io.FileNotFoundException;
import java.util.Random;
public class Cheery {
```

```
public Double min(Double a, Double b) {
public ImageView getCherry image() {
public static Cheery Cheery getinstance(Pillar p1, Pillar p2, PlayerCreate player) {
       cheery = new Cheery(p1,p2,player);
        if (p1!=null) {
            minX = p1.getPillar().getX()+p1.getPillar().getWidth();
        double maxX = p2.getPillar().getX();

};
}
```

(cherry code)

```
@Override
public void onpillar(Pillar p) {
    p.getPillar().setVisible(true);
    p.getRedblock().setVisible(true);
}

@Override
public void ofpillar(Pillar p) {
    p.getPillar().setVisible(false);
    p.getRedblock().setVisible(false);
}
```

Decorator is managed with Pillar for UI to additional feature as to disappear the pillar as the new one.

Now for Junit testings

We have made 3 tests for it as follows

package com.example.stick hero final project;

```
import org.junit.jupiter.api.*;
import java.io.IOException;
import java.nio.FloatBuffer;
public class StickHeroTest {
      Platform.runLater(() -> {
          StickHero p = new StickHero(new PlayerCreate(0, 0, 0, 0), 10, 0, 100, 30,
```

```
} catch (IOException e) {
        throw new RuntimeException(e);
    assertNotNull(p); // Example assertion, replace with your actual test
    Thread. sleep (3000);
} catch (InterruptedException e) {
    e.printStackTrace();
s.setHt(0);
for (int i =0;i<5;i++) {
    s.extend(10);
assertEquals(50,s.getHt());
Pillar p2 = new Pillar (9, 99, 90, 9);
Pillar p4 = new Pillar (9,990,9,9);
PlayerCreate player = new PlayerCreate(0,0,0,0);
Cheery c = Cheery.Cheery getinstance(p1,p2,player);
Cheery c2 = Cheery. Cheery getinstance(p3,p4,player);
if (c.equals(c2)){
    System.out.println(c.toString());
    System.out.println(c2.toString());
   assert(true);
```

Cherry singleton test Stickhero not null test

stickextend test
